Inceputul: Software

...

Open Source Software este software care se distribuie impreuna cu codul sursa, iar aceste surse pot fi vazute , modificate si imbunatatite de oricine.

Exemplu: Linux , OpenOffice , Gimp

Software-ul care are sursele disponibile doar creatorilor se numeste “**proprietary**” sau “**closed source**”. Utilizatorul final nu poate modifica sau imbunatati comportamentul software-ului respectiv.

Exemple: Windows , Word / Excel , Photoshop

De ce Open Source ?

...

- Control
- Securitate
- Stabilitate
- Educatie (invata din codul scris de altii)
- Timp mult mai scurt de pune ideile in practica

Freedom of speech not free beer

“Scratch you own itch”

Impartaseste ideea cu ceilalti

Gaseste si alti omaneni cu acelasi gen de problema (creeaza o comunitate)

Colaboreaza si creste proiectul

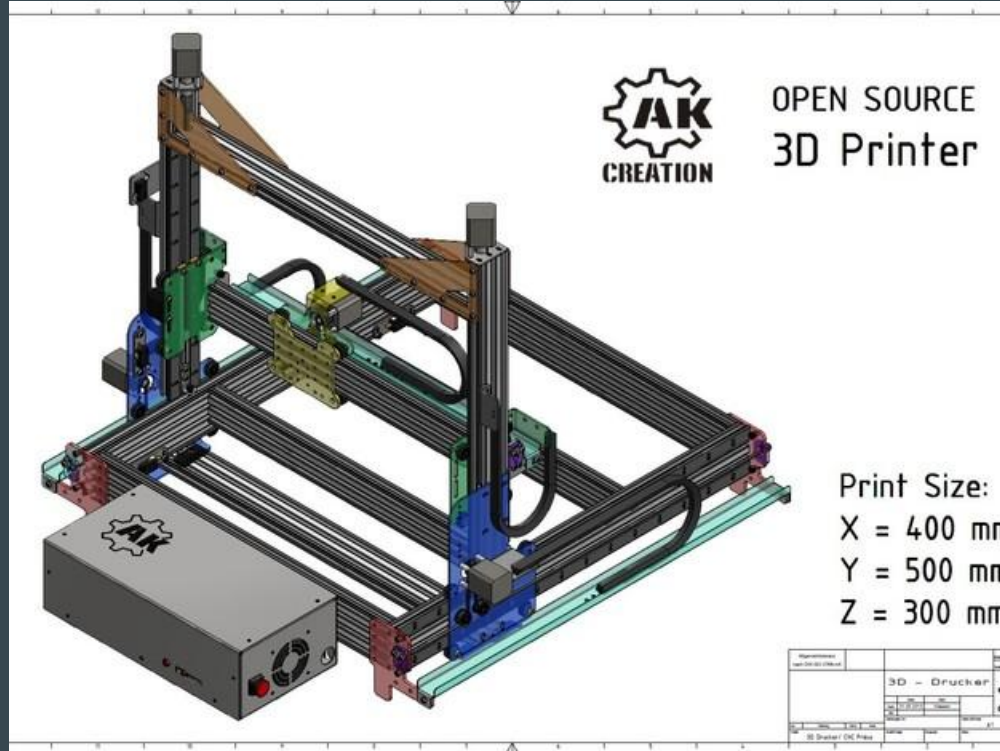

Open Source

...

- Software
- Hardware
- Agricultura
- In toate domeniile gasim open source

OpenSource - 3d printers

OpenSource - Village construction

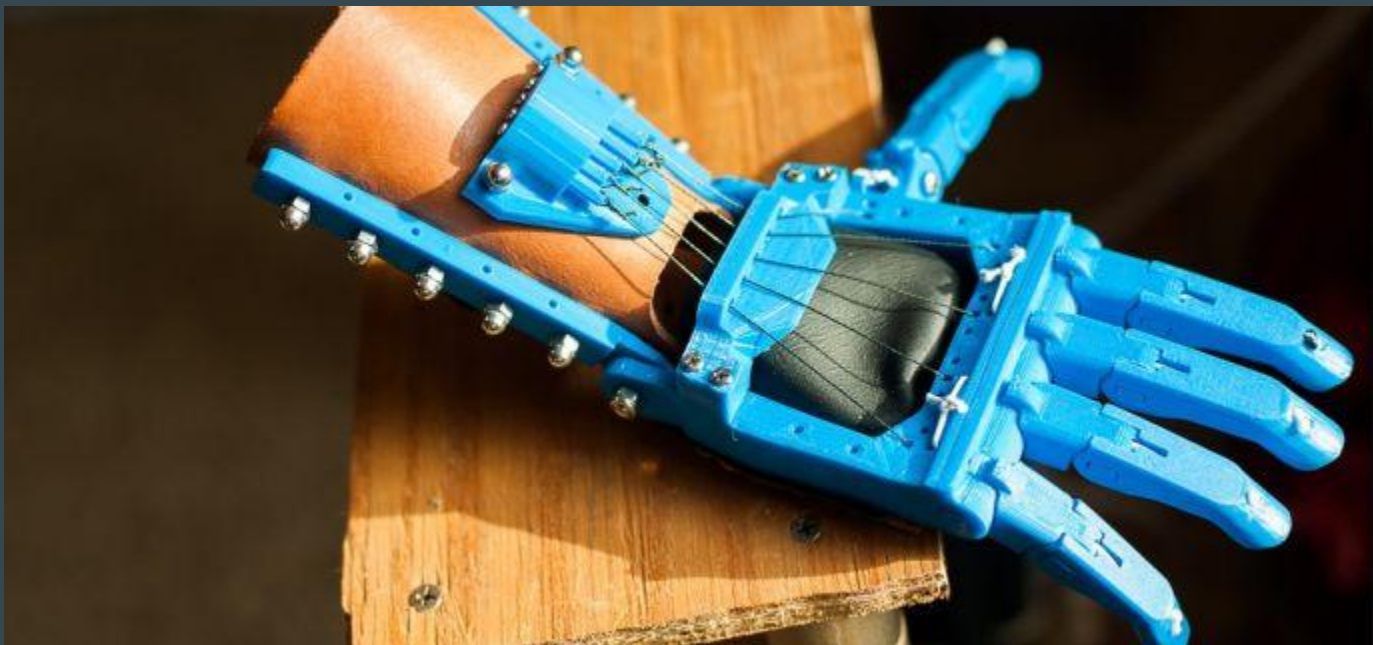

OpenSource - Agriculture

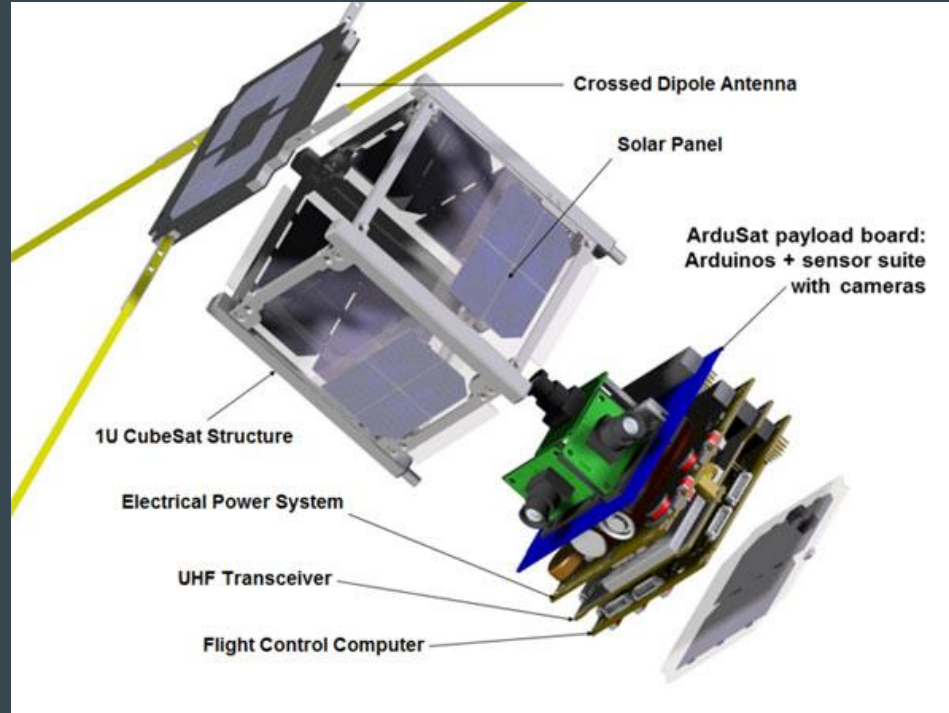

OpenSource - Medicine

OpenSource - satellite

In OpenSource singura limita e
imaginatia voastra

...
